Fig. 1 Optical measurement system

Note 2: Definition of viewing angle range and measurement system.

viewing angle is measured at the center point of the OLED by PR730.

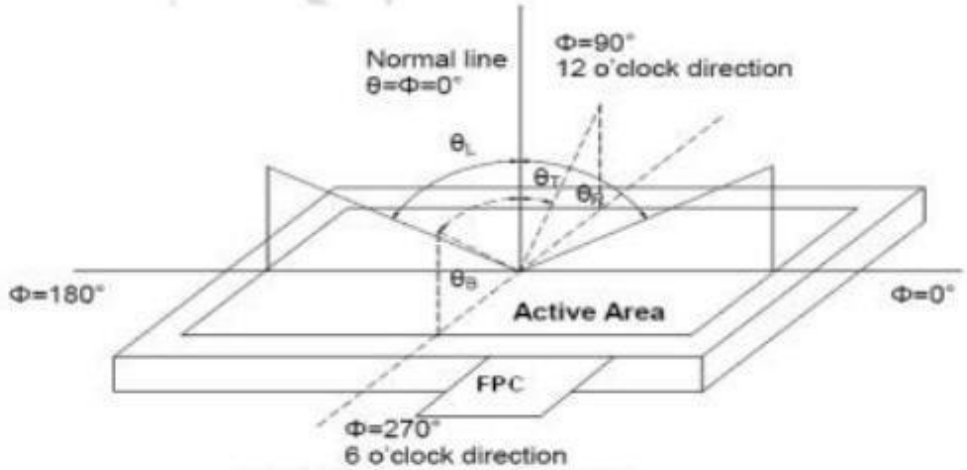

Fig. 2 Definition of viewing angle

Note 3: Definition of contrast ratio

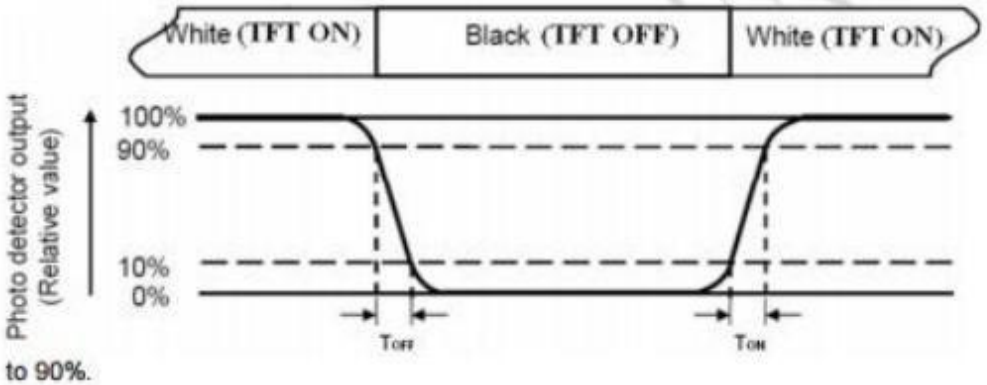
$$\text{Contrast ratio(CR)} = \frac{\text{Luminnace measured when OLED is on the "White" state}}{\text{Luminnace measured when OLED is on the "Black" state}}$$

"White state ":The state is that the OLED should be driven by Vwhite.

"Black state": The state is that the OLED should be driven by Vblack.

Note 4: Definition of Response time

The response time is defined as the OLED optical switching time interval between "White" state and "Black" state. Rise time (TON) is the time between photo detector output intensity changed from 90% to 10%. And fall time (TOFF) is the time between photo detector output intensity changed from 10%



to 90%.

Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of OLED.

Note 6: Definition of Luminance Uniformity

Active area is divided into 9 measuring areas (Refer Fig. 3). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity(U) = Lmin/ Lmax

L-----Active area length W---- Active area width

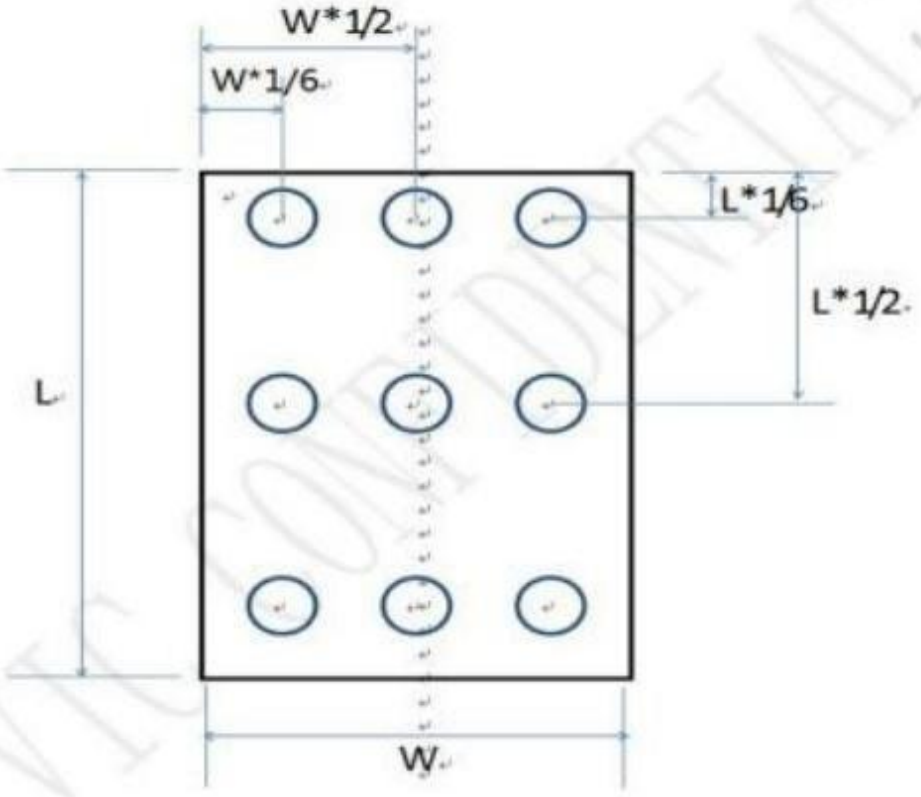


Fig. 3 Definition of uniformity

Lmax: The measured maximum luminance of all measurement position.

Lmin: The measured minimum luminance of all measurement position.

Note 7: Definition of Luminance :

Measure the luminance of white state at center point.

12	Other defects	Level 0/1/2	Subject to the sealed sample, develop limit samples if necessary.	/
13	Color deviation	Level 0	Not allowed (refer to limit sample if necessary)	Minor
14	Leakage around	Level 0	Not allowed	Minor

Note: If some product specifications are not clearly defined, they will be not allowed in control.

Level surface instruction:

Level 0: Important areas such as information or taking photo on the phone. For example, AA display area, camera hole area, ICON silk screen area, IR hole area.

Level 1: The main surface exposed can be seen directly during normal use, such as the front side except level 0. For example, non-display area outside AA area, CG ink area.

Level 2: The reverse side of screen except camera hole, ICON, and IR hole area, such as FPC.

11. Environmental / Reliability Test

No	Test Item	Condition	Remark
1	High Temperature Operation	Ts=+70℃, 240hrs	Note1
2	Low Temperature Operation	Ta=-20℃,240hrs	
3	High Temperature Storage	Ta=+80℃, 240hrs	
4	Low Temperature Storage	Ta=-40℃, 240hrs	
5	High Temperature & High Humidity Storage	Ta=+60℃, 90% RH 240 hours	Note2
6	Thermal Shock (Non-operation)	-40℃ 30 min~+80℃ 30 min, Change time:3min, 100Cycles	Start with cold temperature, End with high temperature,
7	Vibration (Non-operation)	Frequency range:10~55Hz, Stroke:1.5mm Sweep:10Hz~55Hz~10Hz 2 hours for each direction of X.Y.Z. (6 hours for total)(Package condition)	
8	Package Drop Test	Height:80 cm,(When Package weight 10≤M<20 Kg) 1 corner, 3 edges, 6 surfaces	

Note1: Ts is the temperature of panel's surface.

Note2: Ta is the ambient temperature of sample.

Note3: Before cosmetic and function test, the product must have enough recovery time, at least 2 hours at room temperature.

Note 4: In the standard condition, there shall be no practical problem that may affect the display function. After the reliability test, the product only guarantees operation, but don't guarantee all of the cosmetic specification.

12. Precautions for Use of AMOLED Modules

12.1 Handling Precautions:

12.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from height.

12.1.2 Do not press down the screen or the adjoining areas too hard because the color tone may be shifted.

12.1.3 The polarizer covering the display surface of the AMOLED module is soft and easily scratched. Handle this polarizer carefully.

12.1.4 If the display surface is contaminated, blow on the surface and gently wipe it with a soft dry cloth. If it is still not completely clear, moisten the cloth with ethyl alcohol.

12.1.5 Solvents may damage the polarizer. Do not use water, ketone or aromatic solvents except ethyl alcohol.
Do not attempt to disassemble the AMOLED Module.

12.1.6 If the logic circuit power is off, do not apply the input signals.

12.1.7 To prevent destruction from static electricity, be careful to maintain an optimum working environment.

12.1.8 Be sure to make yourself in contact with the ground when handling with the AMOLED Modules.

12.1.9 Tools required for assembly, such as soldering irons, must be properly ground.

12.1.10 To reduce the generation of static electricity, do not conduct assembly or other work under dry conditions.

12.1.11 To protect the display surface, the AMOLED Module is coated with a film. Be careful when peeling off this protective film, because static electricity may generate.

12.2 Storage Precautions:

12.2.1 When storing the AMOLED modules, be sure that they are not directly exposed to the sunlight or the light of fluorescent lamps.

12.2.2 The AMOLED modules should be stored under the storage temperature range. If the AMOLED modules will be stored for a long time, the recommended condition is:
Temperature: 0℃~40℃ Relatively humidity: ≤80%

12.2.3 The AMOLED modules should be stored in the room without acid, alkali or harmful gas.

12.3 Transportation Precautions:

12.3.1 The AMOLED modules should not be suffered from falling and violent shocking during transportation. Besides, excessive press, water, damp and sunshine, should be avoided.
